

## Welcome to smarter asset management

### HTM Program Assessment

Discover what your HTM program is really costing  
and how to take back control.

The **HTM Program Assessment** goes beyond surface-level reviews to pinpoint inefficiencies, uncover hidden costs, and reveal immediate savings opportunities. Built on our experience supporting nearly 4,500 healthcare sites nationwide, this complimentary assessment provides a true picture of program performance across cost, compliance, staffing, and asset lifecycle management.

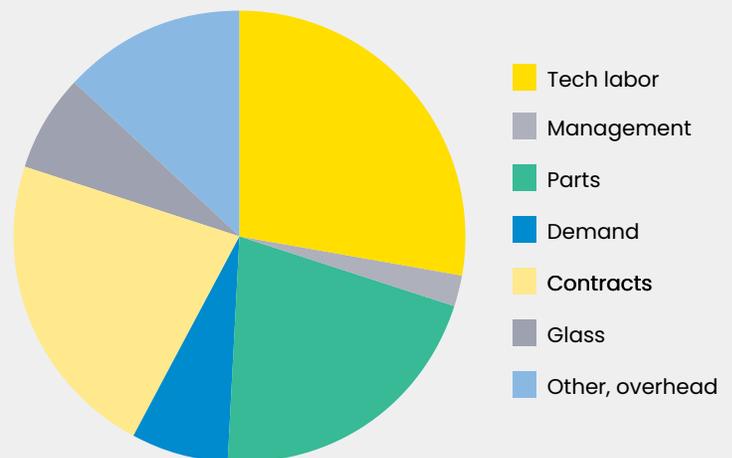

**10-20%**

**On average, clients identify  
10 to 20 percent in day-one  
savings they can act on  
immediately.**

### Balancing the right components

High-performing HTM programs are built on alignment across internal teams, vendor strategies, asset visibility, and long-range planning.

Our analysis highlights where those elements are working together and where gaps in expertise, coverage, or strategy may be holding you back so leadership can strengthen performance—systemwide.

### What we analyze

**To understand the current state of your program, we examine:**

- Clinical asset inventory by modality and location
- Service contracts and vendor dependencies
- Technician skillset alignment with inventory
- Staffing levels, labor costs, and workload balance

## What you receive

**After we complete the analysis, we provide a detailed report that includes:**

- **True CE spend vs. perceived spend** across the last three years
- **Savings opportunities** through contract consolidation, workflow optimization, and strategic redeployment
- **Systemwide visibility** into asset distribution, replacement value, and device performance
- **Benchmarks** comparing your results to industry and peer data
- **Tailored recommendations** based on your organization's clinical, financial, and operational goals

## What you gain

**The analysis typically leads to:**

- **10–20% in day-one savings opportunities**
- **Immediate actions items** to reduce external service costs
- **Capital planning** supported by equipment performance data
- **Stronger, data-driven decisions**

## How it works

**No added burden. We coordinate directly with your team to collect:**

- Budget data (past and current)
- Work order and asset performance data
- Service level details
- Clinical engineering labor costs
- Inventory reports

Our financial analysts, HTM experts, and CE-IT advisors review your program from every angle. Then we'll walk you through your findings and identify your next best steps. **No commitment. Just better clarity to help drive smarter asset management.**
